

Science Awareness

Majority of the teachers take teaching as a job and not more than that. They are not concerned whether their teaching helps the student to use that knowledge in their day to day life. By this, children are suffering immensely. It's a huge loss for individual student and our Nation's Future.

So if we want to survive in this age of Globalization, this should be changed. If we are able to give our children scientific view at an early age, then only we would be able to cultivate the scientific thinking. Then in future we can say that they will be able to use this in their life for agricultural development, any business or any other activity for the betterment of their lives & hence will be able to increase their production otherwise a foreign farmer will capture our market by selling the same product as ours in half the price as ours and that too of good quality and yield than us. This thing is not impossible in near future infact its already started also for example; Due the silk product by china, our silkworm rearing farmers form Karnataka are almost thriving hard of unemployment and even hunger.

Today its silk tomorrow it can be wheat, jowar or bajara or any other product. We have to take major steps to prevent this today itself & for this to happen there should be well scientific approach inherited.

There should be liking for science and scientific things in children form their school days. This will enable them to use this scientific knowledge in their day to day activities in future and ultimately which will help them to bring progress & prosperity in their lives as well as for others in the society. So keeping this view in mind, to educate and create awareness among the villagers, YPS has established a well equipped **'Central Science Laboratory & Computer Center'** at Jalihal.

CSLCC is the facility for all the schools from 22 villages. Here, the students can perform experiments from Physics, Chemistry, Biology with their own hands. The schools bring their students according to the schedule. Teacher and YPS lab assistant help the students in performing the experiments. Here, at a time 80 students can make use of this Lab. Computer Education is also given to these village children which enables them to utilize it to make more simplified study of English & Mathematics. About 200-250 students visits this Lab. regularly every week.
